LBVS INTRO | OUR VESTS

WOLFCOM®

LOAD BEARING VESTS

An introduction

Wolfcom Load Bearing Vests are used by over 1000 agencies throughout Australia and New Zealand.

They have been designed to meet the needs of many of our clients who work in many different areas of National Parks and Wildlife, Animal Management, Traffic Response/Parking, etc. They are durable and breathable and a great addition to any teams that require a versatile vest to minimize strain on the hips and back.

They are seen by many of our clients as an Occupational Health and Safety requirement, as they disperse the weight evenly throughout the body.

We have two feature vests that are widely stocked, as shown in this document.

We also make the Velcro removable patches in reflective text or digital heat and can be customised according to your client's requirements. These can be attached to the front chest, back and front vertical zip cover patches.

Care Instructions

WHY CARE ABOUT SAFETY VEST MAINTENANCE?

In a nutshell, these guidelines were developed to assist you to maintain the colours, appearance and quality of the vests, as over time and with use, the retro-reflective materials and fluorescent dyes that comprise your safety vest can:

- Fade with exposure to UV radiation from the sun
- Dull from wear and tear
- Become obscured by dirt and grime

These factors defeat the purpose of those materials. After a while, you'll be wearing a not-so-high-visibility vest!

With all of that said, it should be obvious why keeping your high-visibility safety vest in pristine condition is of paramount importance.

STEP-BY-STEP VEST CARE INSTRUCTIONS

The following steps constitute the ideal method for how to clean your safety vest. (Do not use bleach or dry-clean!)

- 1. Prepare.** Fill a tub with cold water. Dissolve a detergent of your choice in the water. Use a neutral detergent because the alkalinity of most detergents can decompose the fluorescent brighteners used in your vest's dye and weaken its fibres. Neutral detergents are cold-water-soluble. Shampoo is a suitable substitute if no neutral detergents are available.
- 2. Treat for Stains.** Use a soft, dry cloth to remove loose dirt. Apply a mild stain remover with a dry cotton cloth. Allow the stain remover to set for as long as directed
- 3. Soak** in the tub of cold, soapy water for 20 to 30 minutes
- 4. Rub** Gently rub the fabric with your hands, or scrub them lightly with a soft brush
- 5. Wash** your vest under cold running water to remove all soil and detergent products
- 6. Dry.** Hang on a line to dry (in shade)

Limit exposure to the sun, as UV radiation from the sun damages its reflective materials. Avoid wringing dry, as this process can cause mechanical damage to your vest's reflective components.

MACHINE WASHING NOT ADVISABLE
